

AIR•O

Air O is the air plant display shelf that bridges a gap between indoor-outdoor space, so that nature can be integrated into any room seamlessly and organically.

MARKET RESEARCH

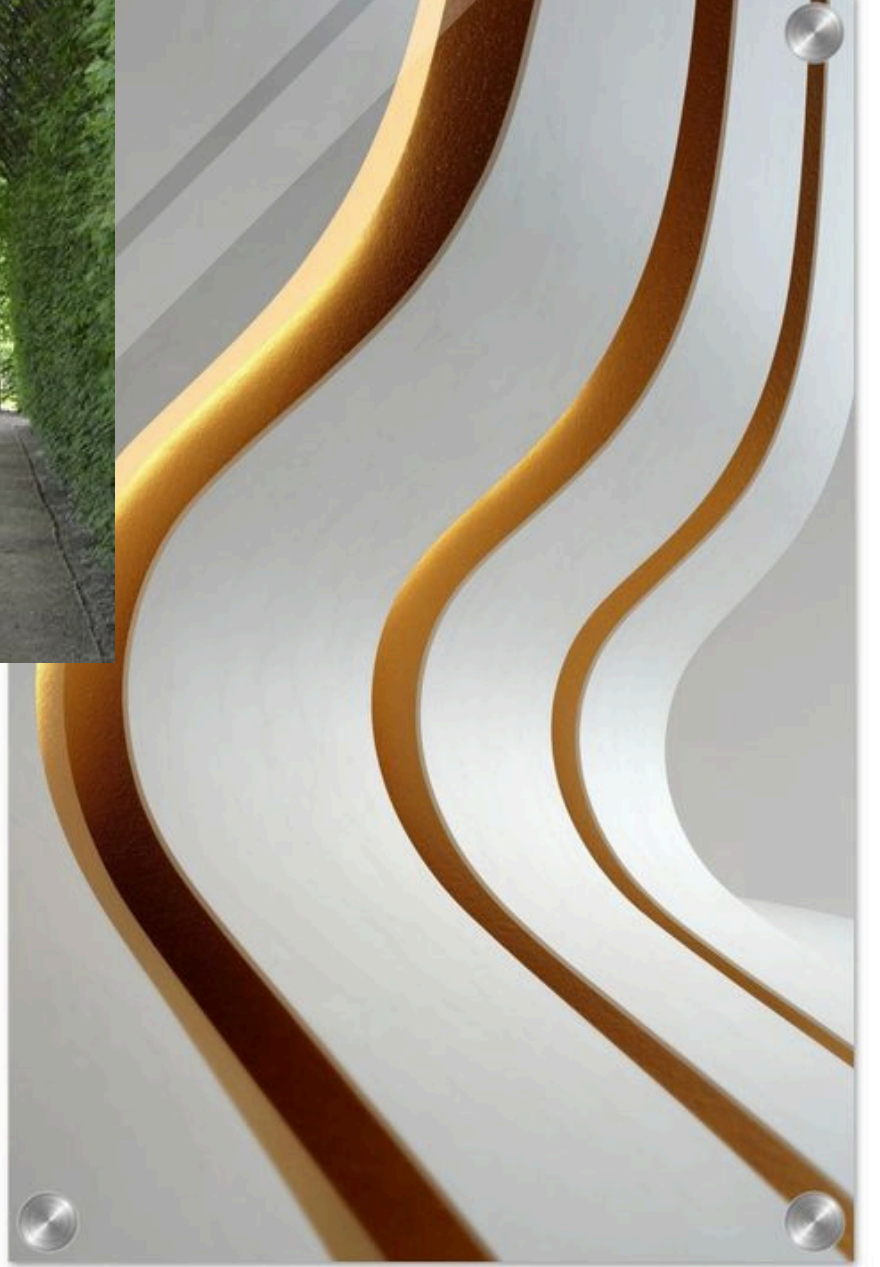

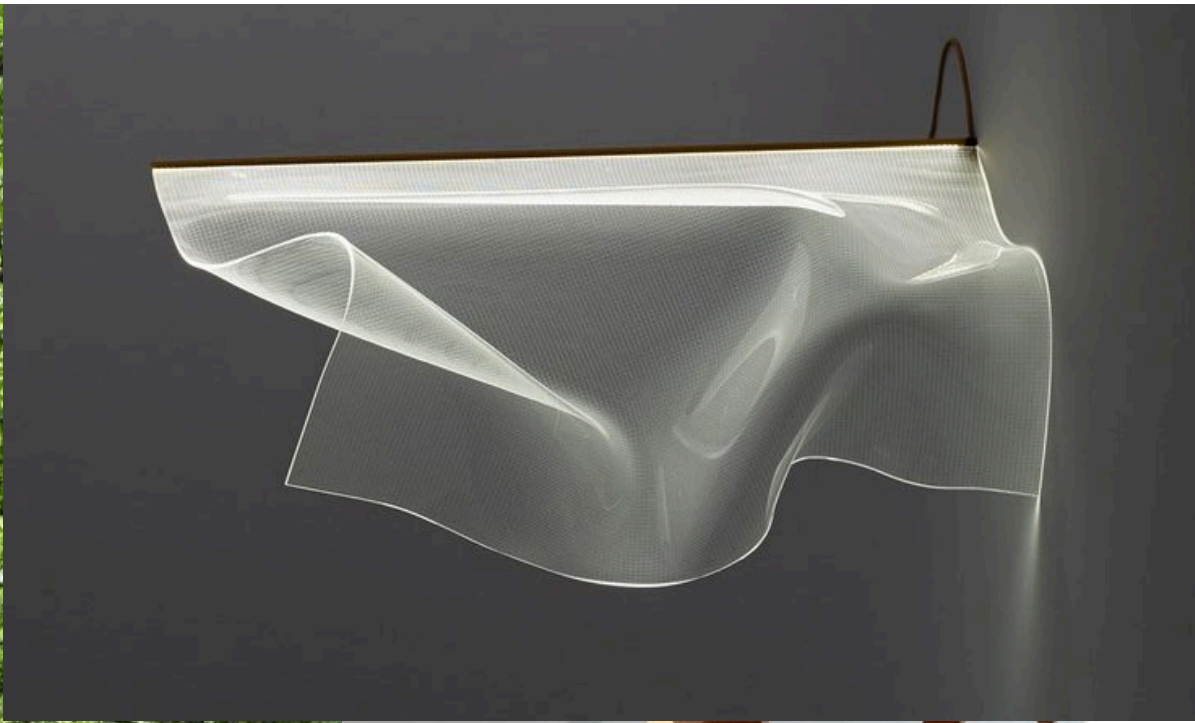

Large Discrepancies In:

- Prices
- Ornateness
- Aesthetics
- Suitability for Plants

Mitigate This By:

- Using interesting form to enhance simple materials
- Functionally, yet safely, storing plants
- Hold various amnt/sizes of plants

BRACKET DESIGN CONCEPT

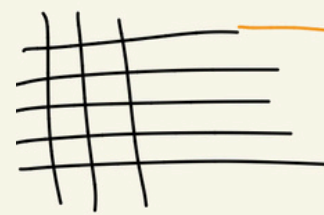

-plants

↳ connect to display

stem??

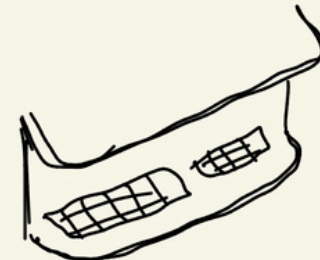

branch??

tree??

needs mesh wiring to hold

*also needs to be mat that won't refract light
some type of shading

panels maybe?

continuous folding pockets under roof

hang on rod??

plants could hang under shade

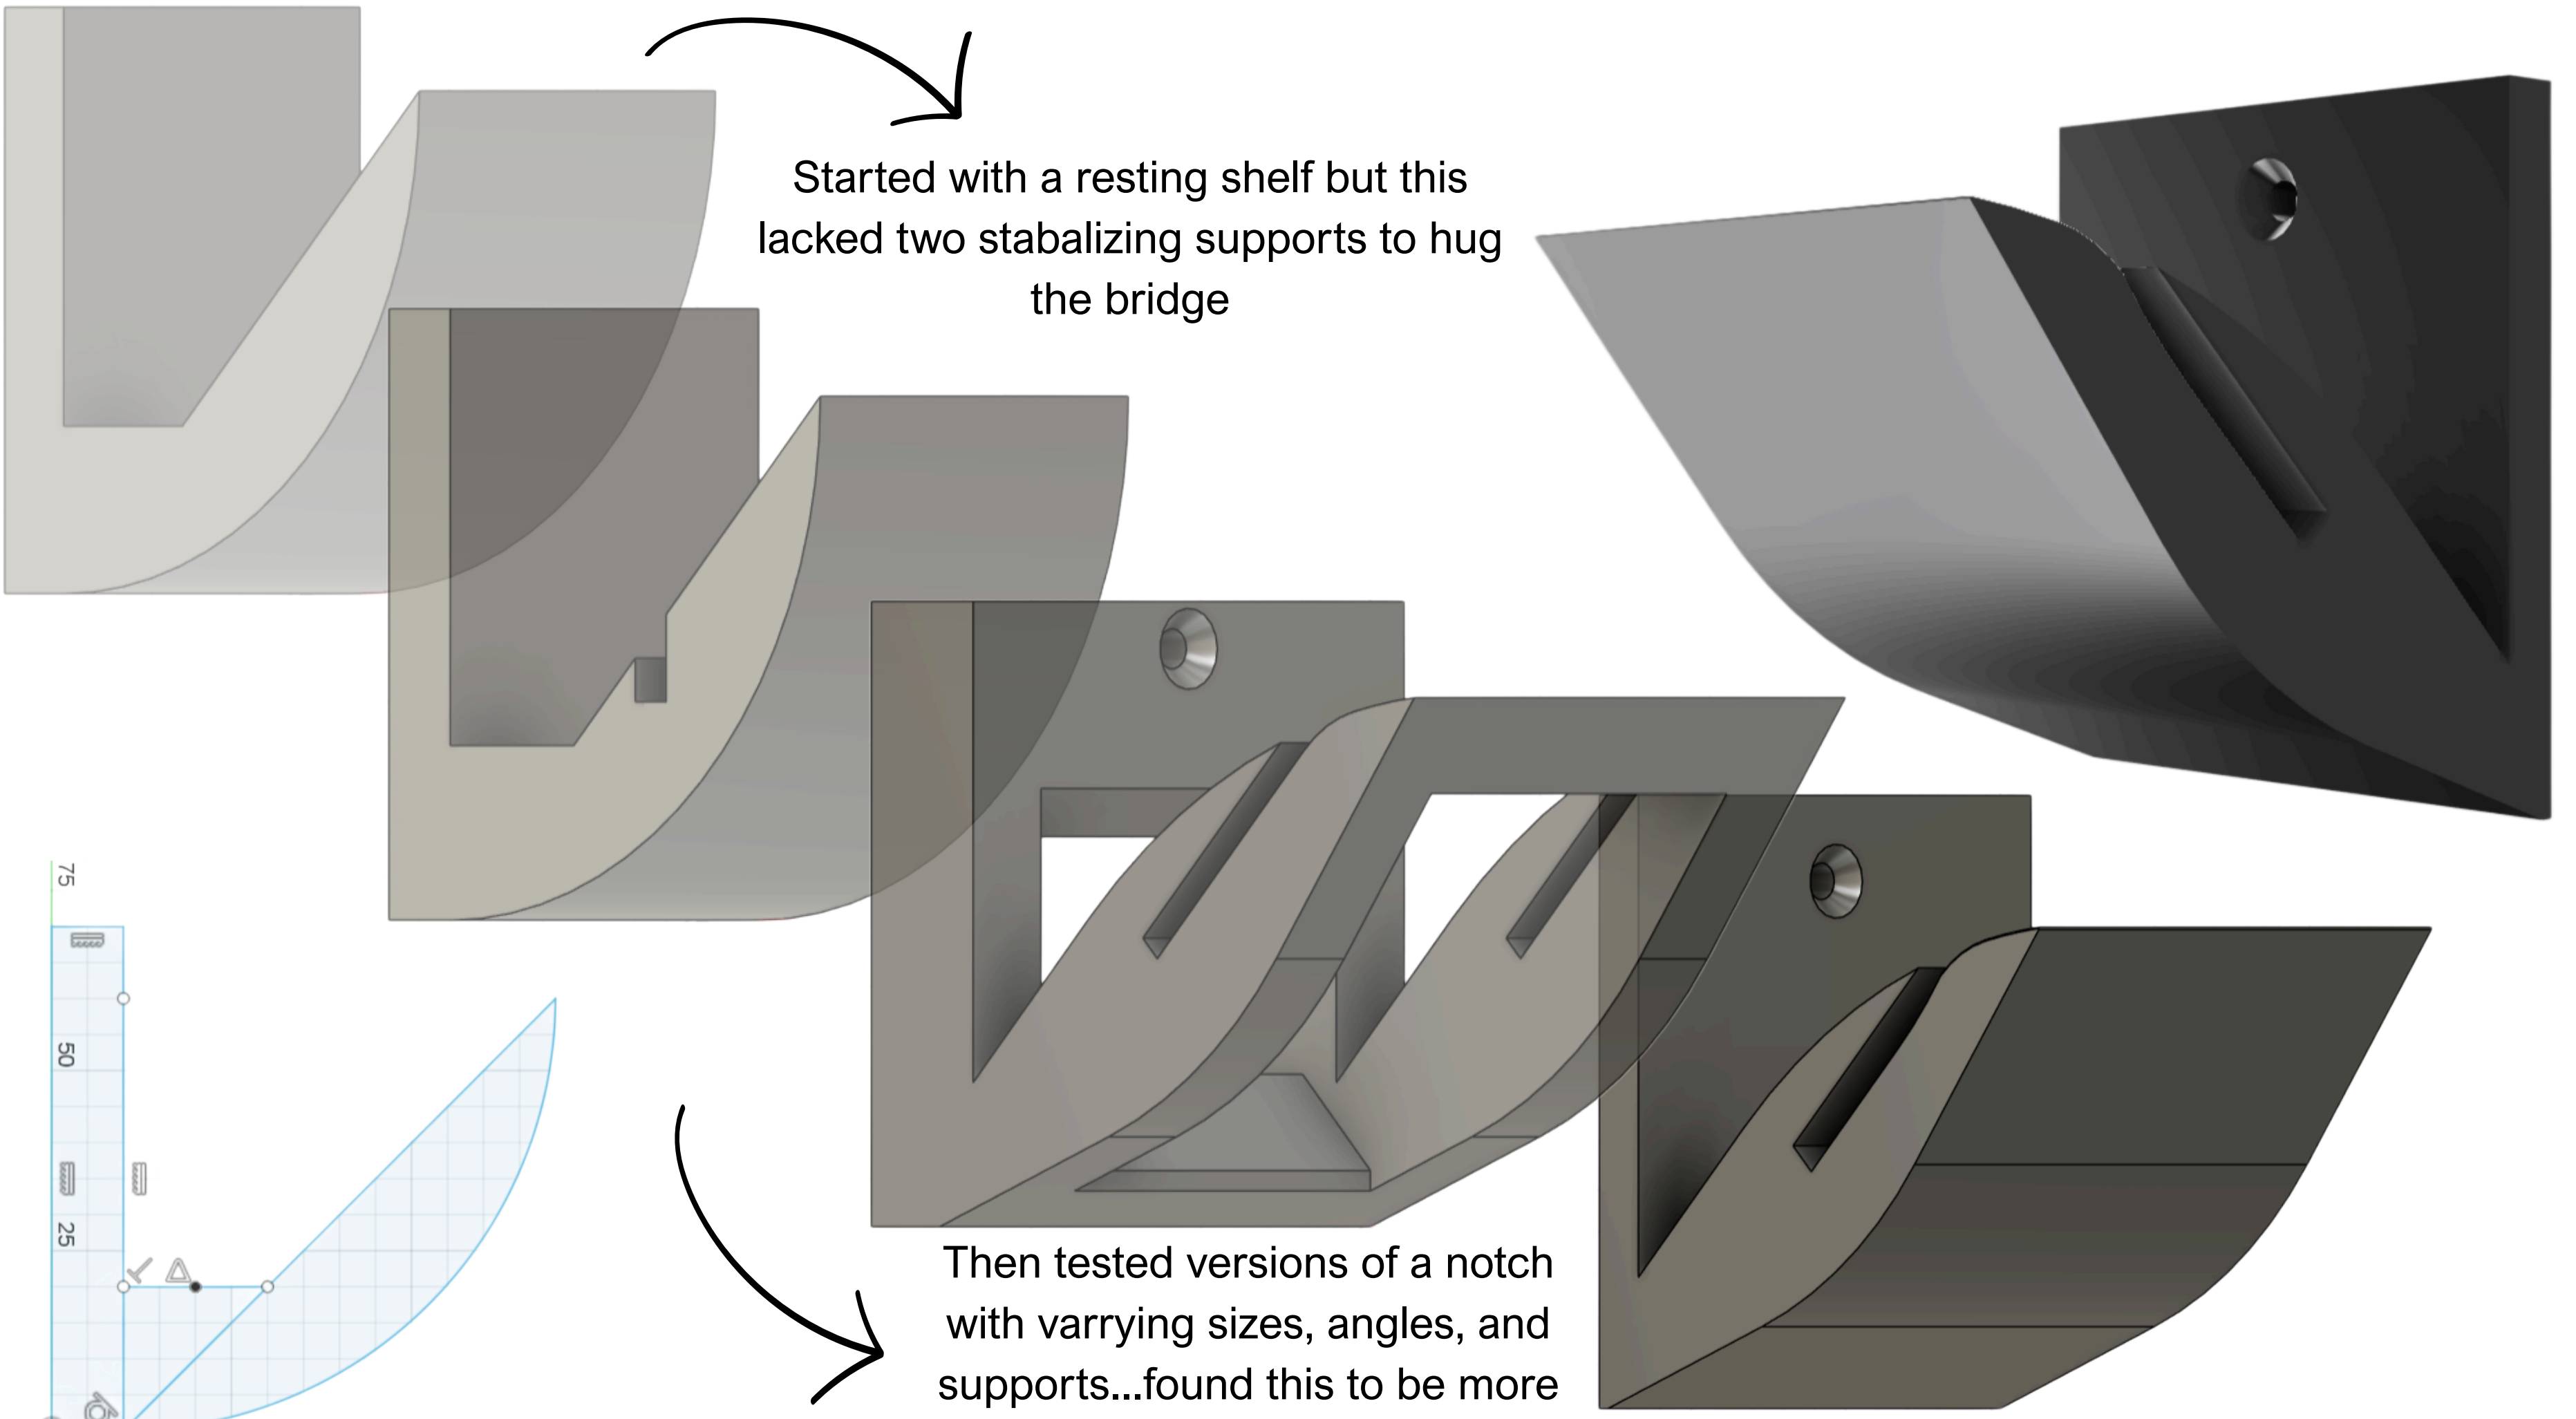

ENHANCED SIMPLICITY

Organic curvature to enhance sporadic growth of air-plant leaves...keep form simple in design

SLEEK

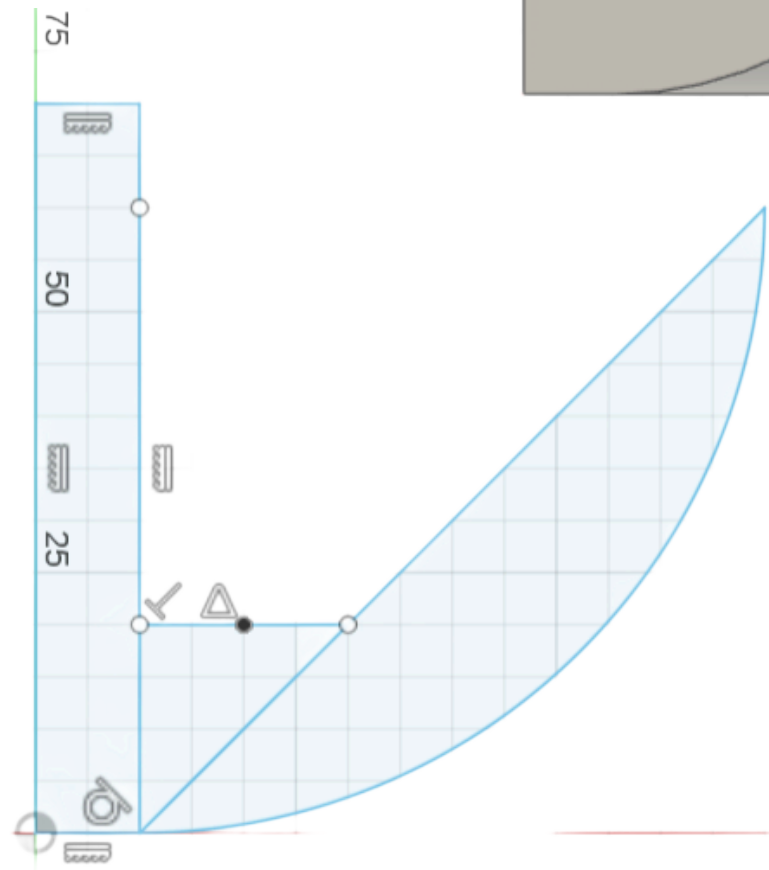

Wanted to prioritize shading and effective mesh storage

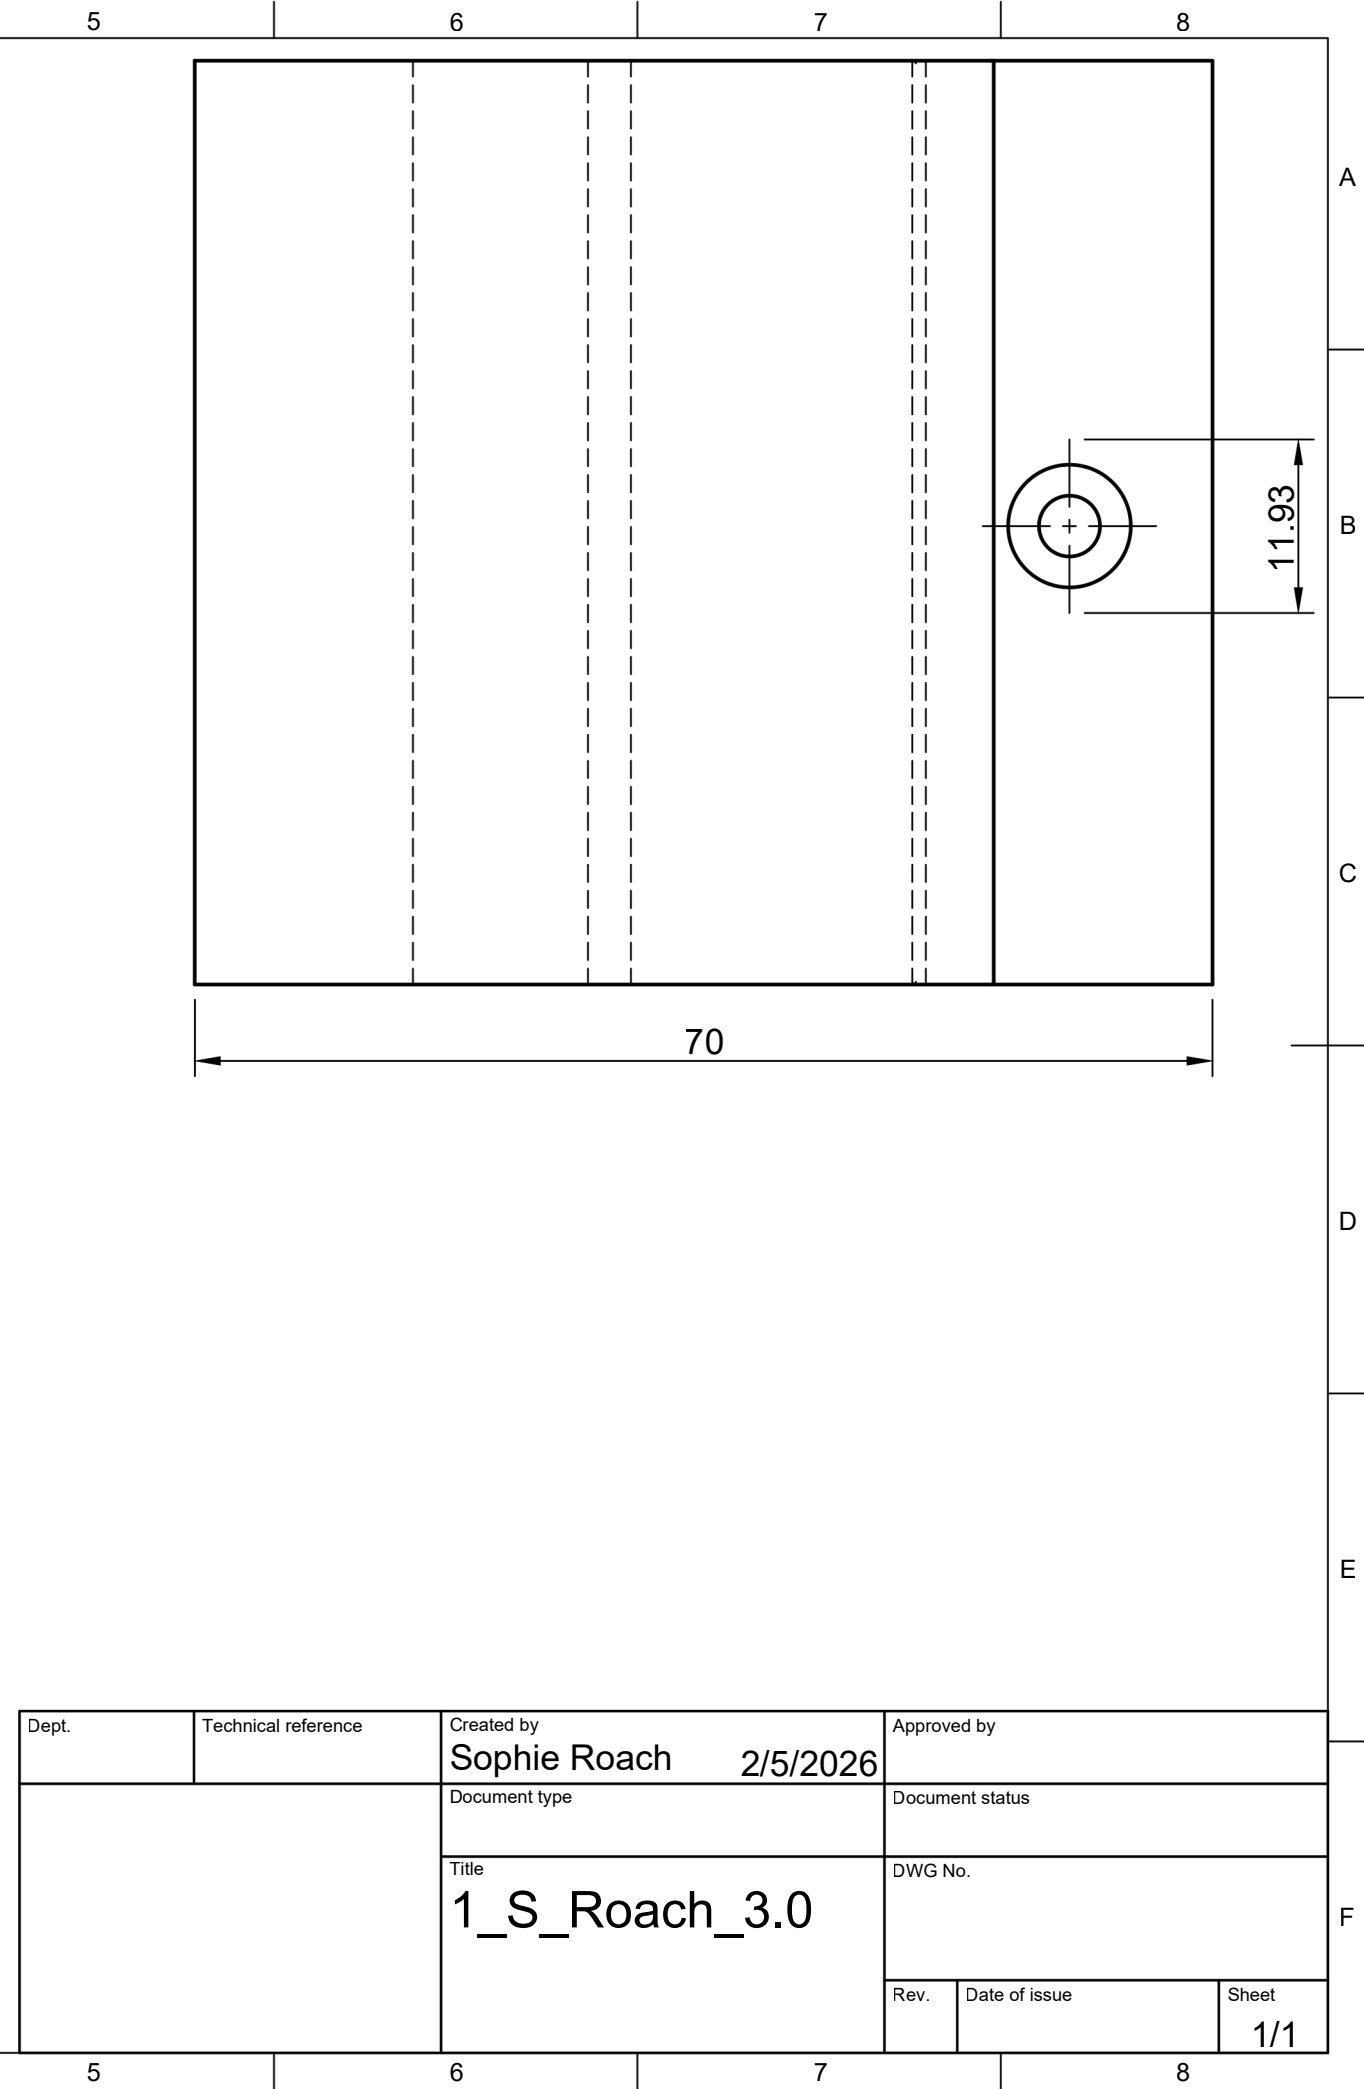

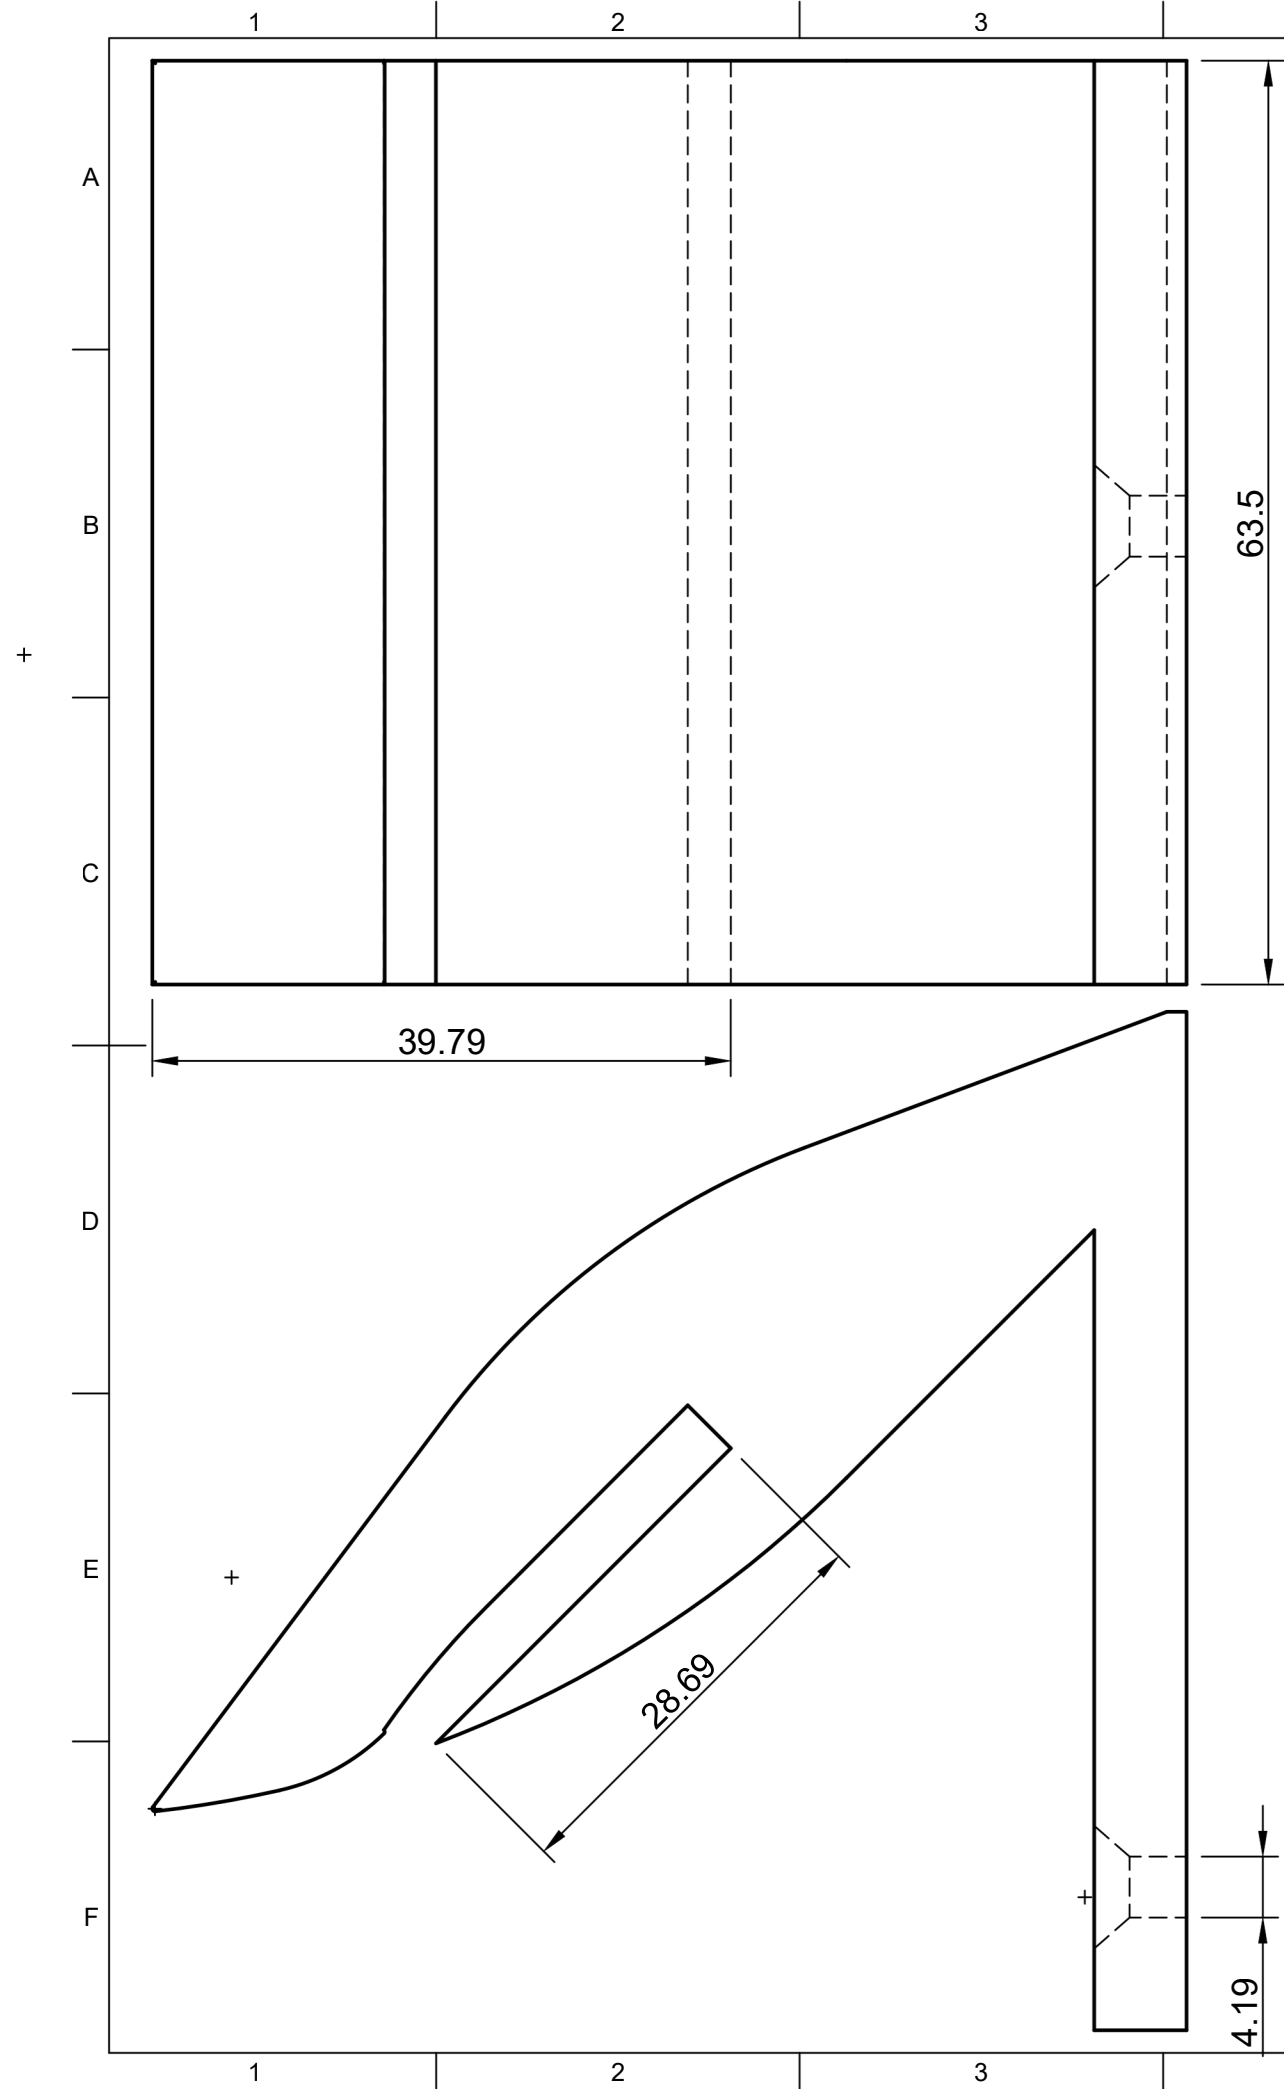

Bendable material- wood feels more organic to display but acrylic enhances form

Started with a resting shelf but this lacked two stabilizing supports to hug the bridge

Then tested versions of a notch with varying sizes, angles, and supports...found this to be more stabilizing
